

# WhatsApp Troubleshooting Guide

Self-directed practice project | Structured authoring in MadCap Flare

This project is a troubleshooting guide written for WhatsApp users, covering common issues such as message delivery failures, call connectivity, notifications, app crashes, and media downloads. It was authored end-to-end in MadCap Flare, following a consistent Problem / Possible Cause / Steps to Fix structure for each topic to keep the content predictable and easy to scan.

## Problem 2: WhatsApp Calls Not Connecting

**Problem:** Voice or video calls fail to connect, drop immediately, or have poor audio and video quality.

**Possible Cause:** Weak internet connection, microphone or camera permissions denied, or a VoIP restriction in your region.

**Steps to Fix:**

1. Make sure you have a strong Wi-Fi or mobile data connection.
2. Go to Settings and confirm Microphone and Camera permissions are set to Allow.
3. Close any other apps using your microphone or camera in the background.
4. If you are using a VPN, disable it and try the call again.
5. Uninstall and reinstall WhatsApp if the issue persists.

**Note:** If you are in a region that restricts VoIP calls, contact your mobile network provider to check if WhatsApp calls are supported.

## Problem 3: Notifications Not Showing

**Problem:** WhatsApp messages arrive but no notification sound or banner appears on your device.

**Possible Cause:** Notifications disabled in WhatsApp settings, device Do Not Disturb mode is active, or battery optimization is blocking WhatsApp.

**Steps to Fix:**

1. Open WhatsApp and go to Settings and make sure Message Notifications is turned on.
2. Go to device settings and confirm that Allow Notifications is enabled for WhatsApp.
3. Check if Do Not Disturb or Focus Mode is active and disable it.
4. On Android go to Settings and set WhatsApp to Not Optimized under Battery Optimization.
5. Restart your device and send yourself a text message from another number.

## Problem 4: WhatsApp Crashing or Freezing

**Problem:** WhatsApp closes unexpectedly, becomes unresponsive, or freezes while opening or during use.

**Possible Cause:** Low device storage, corrupted cache files, or an outdated version of the app.

**Steps to Fix:**

1. Check your device storage and confirm you have at least 1 GB of free space.
2. On Android go to Settings and clear the WhatsApp cache under storage.
3. Update WhatsApp to the latest version from the App Store or Google Play.
4. Restart your device to free up memory.
5. If WhatsApp still crashes, try uninstalling and reinstalling the app.

**Note:** Before uninstalling, ensure your chats are backed up via Google Drive (Android) or iCloud (iPhone). If WhatsApp is accessible, navigate to Settings → Chats → Chat Backup → Back up Now.

## Problem 5: Unable to Download Media (Photos and Videos)

**Problem:** Photos, videos or voice messages sent to you do not download or show a download error.

**Possible Cause:** Poor internet connection, insufficient device storage, or WhatsApp storage permissions denied.

**Steps to Fix:**

1. Confirm your internet connection is working by opening a browser and loading a webpage.
2. Check your device storage and ensure there is enough free space for media downloads.
3. Go to Settings → Apps → WhatsApp → Permissions and confirm storage is set to allow.
4. In WhatsApp go to Settings → Storage and Data and check Auto-Download is configured correctly.
5. Tap the download icon on the media item manually to retry the download.
6. If the issue continues go to Settings → Apps → WhatsApp → Storage and clear the cache.

## Contact Support

If none of the solutions above resolved your issue, further help is available through the following official channels:

**Help Center:** <https://faq.whatsapp.com>

**In-App Support:** WhatsApp Settings Help Contact Us.
